EURASIA: EAC UPDATES AND STANDARD GOST

On February 9th 2021, the changes ordered by the Ministry of Economic Development and Trade came into force, concerning the procedure for registering the EAC declarations of conformity or the obligation to indicate the identification codes GLN and GTIN. These identifiers must be indicated during registration of the EAC declaration, without which it will not be possible to proceed with registration.

For the sale and circulation of goods, products must have a valid document of conformity (certificate or declaration) in relation to one or more specific technical regulations (TP TC) applicable. If the product does not fall into any TP TC category, the Letter of Exemption is produced, which is an official voluntary document, issued by an accredited body, in which the certifying body itself specifies the reasons for which the request for obtaining of the certificate / declaration of conformity for a particular TR CU is not applicable. There is no single template, but it is necessary to declare, for example, the specific information of the certifying body and the list of products subject to the request.

Regarding the medical devices, they must be registered within 6 months of their placing on the market. The deadline for issuing an import permit is 5 working days from the date of submission and acceptance of the application and related documents. To obtain the permit, it is necessary to submit a request signed and stamped by the organization which must contain a series of documents regarding the medical device and the data of the applicant company.

On the 12th the EAEU Technical Committee 339 on "Safety of raw materials and substances" has reviewed all comments submitted during last public consultation related to GOST standards referenced in the Eurasia REACH (TR041) and CIS Center experts have developed the final draft versions of the following standards:

- GOST 30333- Chemical Safety Passport. General requirements.
- GOST 32419- Classification of Chemical Products. General requirements.
- GOST 31340- Warning labeling of chemical products. General requirements.

These standards will become mandatory once Eurasia REACH is in force and have to be applied for classification and labelling of chemical products placed in the EAEU and for the purposes of chemical safety passports preparation.

UPDATE PROPOSED FOR CALIFORNIA'S PROPOSITION 65

CALIFORNIA PROPOSITION 65
WARNING

This product can expose you to chemicals which are known to the State of California to cause cancer, birth defects or other reproductive harm.

For more information, go to
www.P65Warnings.ca.gov

The California Safe Drinking Water and Toxic Enforcement Act (1986) is a law that regulates the presence and the limits of different chemical substances in products marketed in the Californian territory and that prohibits the release of these substances into drinking water sources by productive companies. It contains more of 1000 chemical substances capable of causing cancer, congenital malformations and reproductive problems and it requires that all consumer goods which contain these chemical substances must have warning labels and/or pictograms designed to inform the consumer of the exposure to the risk. The warning label shall contain the HAZARD LOGO and the word WARNING and it shall appear as extended form or short form.

On 8 January 2021, the Office of Environmental Health Hazard Assessment (OEHHA) proposed some significant changes to the content and conditions for use of the short form warning like the inclusion in the short form warning of at least one toxic substance responsible for the risk associated with the product.

**KKIDIK (TURKISH REACH): LATE PREREGISTRATION ACCEPTED BY
TURKISH AUTHORITY ONLY EARLY 2021****ACT NOW IF YOU LOST THE LAST DEADLINE**

In 2017, Turkey published and consolidated the text of the KKIDIK regulation regarding chemicals that can be placed on local national market. The scheme adopted follows the European REACH regulation in many prescriptions, so much so that it is often referred to as Turkey-REACH.

One of the significant differences is that there is only one registration deadline for all tonnage bands, set for 31/12/2023.

At this stage, the possibility is open to pre-register by 31/12/2020 but the Turkish government seems to accept late preregistration until 31.12.2023.

Moreover, in the last quarter of 2021 The MoEU will add a sub-tool into the KKS in order to generate Chemical Safety Report.

As for REACH EU, applicants must be Turkish legal entities. Non-Turkish companies that want to keep the market will have to appoint a local OR (only Representative). RNI srl can offer this service.

SEA UPDATES:

The SEA CLP like Regulation has been updated, adding 110 new substances to the Harmonized List of classification and labeling "and new hazard classifications. Furthermore, only polymers must be notified and not their ingredients.
