SPAIN: NEW PROFESSIONAL EXPOSURE LIMITS PUBLISHED

Recently the new occupational exposure limits from chemical agents were published in Spain.

The various national regulations on prevention, risk assessment and risk prevention at work, imply the use of exposure limit values in order to assess the risk due to exposure to chemical agents, when it is quantitatively determined, i.e. through concentrations in the air in the workplace.

The document is reviewed and updated annually for the adoption of occupational exposure limit values at Community level or for needs deriving from changes in production processes, from the introduction of new substances, from new technical-scientific knowledge and from the updating of laws in which I apply.

These lists are also applied to nano materials and exposure limits are established in its application in the practice of industrial and non-industrial hygiene. Among the novelties:

- Update of environmental limit values
- Added biological limit value for aniline and cumene
- In the subject and scope section, a warning for pregnant or breastfeeding workers has been included
- The definition of Deviation Limits (LD) in section 5.3 has been changed.

ECHA: SCIP CANDIDATE LIST UPDATED

ECHA has released a new package for SCIP notifications, which is aligned with the new substances added to the Candidate List. When providing information on Candidate List substances in the SCIP notification, the IUCLID Reference Substance approach should be used. Reference substances can be created in IUCLID, but it is better to use ECHA's pre-made SCIP package and import it to your IUCLID instance.

The Candidate List reference substances package for SCIP notifications includes:

- datasets of individual reference substances;
- a change log of the Candidate List package;
- Delta package reference substance dataset; And
- a list of reference substances.

FRANCE: PLASTIC PACKAGING FOR FRUIT AND VEGETABLES BANNED

In France, from 1 January 2022, around thirty fresh fruit and vegetables can no longer be sold in plastic packaging. Distributors say they are ready, horticulturists and producers a little less. Therefore, according to the new provision on the shelves of large-scale distribution, these products will have to be sold in bulk or in alternative containers (cardboard or paper), and this should make it possible to eliminate about 1 billion unnecessary packaging per year as estimated by the Paris government.

A period of six months will be guaranteed to dispose of existing stocks starting in January. The authorities have also provided exemptions for, for example, more delicate products such as mushrooms, red fruits, apricots, medlar and new potatoes, which can still be marketed in plastic containers until 2026.

UK: LATE DUIN IS POSSIBLE

On 27th October the possibility to notify DUIN (Downstream Import Notification) in the UK expired. Companies that submitted their notifications for their substances in time to the HSE, will benefit from extended UK REACH registration deadlines as follows: 27 October 2023, 2025, and 2027 depending on the annual tonnage and the hazards of the substance. However, companies that have not notified their substances by the deadline and wish to continue importing EU REACH registered substances into the UK market at 1 tonne or more per year can still submit DUIN late notifications.

UK-based importers and UK-based only representatives appointed by non-UK suppliers (such as non-UK manufacturers / formulators) may submit DUIN notifications late. When the designated OR sends the late DUIN, the GB downstream users will be covered by this DUIN and will not have to send their own.

The HSE recommends doing this as soon as possible.

Our UK - BREXIT services cover the fulfillments of national regulations in the UK which will come into force after the release.

RNI srl provides the services listed for EU companies and for UK based companies:

- For national authorization applications still under evaluation in the UK, submitted by companies based in the EU, it is necessary that the latter appoint their own OR (based in the UK) by 31.12.2021 to continue the authorization process.
- LATE DUIN notification for GB importers of substances and mixtures is possible after 27.10.2021
- New UK REACH registrations according to new deadlines
- Compliance with new UK regulations (REACH, CLP; BPR, etc.)
- Exclusive Representation Services in UK for Italian / EU companies (OR service)

In collaboration with our partner LANDILEX, we also offer [legal consultancy](#).

KKIDIK (TURKISH REACH): LATE PREREGISTRATION ACCEPTED BY TURKISH AUTHORITY ONLY EARLY 2021

ACT NOW IF YOU LOST THE LAST DEADLINE

In 2017, Turkey published and consolidated the text of the KKIDIK regulation regarding chemicals that can be placed on local national market. The scheme adopted follows the European REACH regulation in many prescriptions, so much so that it is often referred to as Turkey-REACH.

One of the significant differences is that there is only one registration deadline for all tonnage bands, set for 31/12/2023.

At this stage, the possibility is open to pre-register by 31/12/2020 but the Turkish government seems to accept late preregistration until 31.12.2023.

Moreover, in the last quarter of 2021 The MoEU will add a sub-tool into the KKS in order to generate Chemical Safety Report.

As for REACH EU, applicants must be Turkish legal entities. Non-Turkish companies that want to keep the market will have to appoint a local OR (only Representative). RNI srl can offer this service.

SEA UPDATES:

The SEA CLP like Regulation has been updated, adding 110 new substances to the Harmonized List of classification and labeling "and new hazard classifications. Furthermore, only polymers must be notified and not their ingredients.
